10 TITLE OF THE INVENTION
ESTER DERIVATIVES OF 4-AZA-STERIODS

BACKGROUND OF THE INVENTION

15 The present invention is directed to new
17-position ester and thioester derivatives of
4-azaandrostan-3-ones and related compounds and the
use of such compounds as 5 α -reductase inhibitors.

20 The art reveals that certain undesirable
physiological manifestations, such as acne vulgaris,
seborrhea, female hirsutism, male pattern baldness
and benign prostatic hypertrophy, are the result of
hyperandrogenic stimulation caused by an excessive
accumulation of testosterone or similar androgenic
hormones in the metabolic system. Early attempts
25 to provide a chemotherapeutic agent to counter the
undesirable results of hyperandrogenicity resulted
in the discovery of several steroidal antiandrogens
having undesirable hormonal activities of their own.

30

- 2 -

The estrogens, for example, not only counteract the effect of the androgens but have a feminizing effect as well. Non-steroidal antiandrogens have also been developed, for example, 4'-nitro-3'-trifluoromethyl-isobutyranilide. See Neri, et al., Endo., Vol. 91, No. 2 (1972). However, these products, though devoid of hormonal effects, are peripherally active, competing with the natural androgens for receptor sites, and hence have a tendency to feminize a male host or the male fetus of a female host.

It is now known in the art that the principal mediator of androgenic activity in some target organs is 5 α -dihydrotestosterone, and that it is formed locally in the target organ by the action of testosterone-5 α -reductase. It is also known that inhibitors of testosterone-5 α -reductase will serve to prevent or lessen symptoms of hyperandrogenic stimulation.

A number of 4-aza steroid compounds are known in the art as 5 α -reductase inhibitors. For example, See U.S. Patent Nos. 2,227,876, 3,239,417, 3,264,301 and 3,285,918; French Patent No. 1,465,544; Doorenbos and Solomons, J. Pharm. Sci. 62, 4, pp. 638-640 (1973); Doorenbos and Brown, J. Pharm. Sci., 60, 8, pp. 1234-1235 (1971); and Doorenbos and Kim, J. Pharm. Sci. 63, 4, pp. 620-622 (1974).

In addition, U.S. Patent Nos. 4,377,584, 4,220,775, 4,859,681, 4,760,071 and the articles J. Med. Chem. 27, p. 1690-1701 (1984) and J. Med. Chem. 29, 2998-2315 (1986) of Rasmusson, et al., U.S.

- 3 -

Patent 4,845,104 to Carlin, et al., and U.S. Patent 4,732,897 to Cainelli, et al. describe 4-aza-17 β -substituted-5 α -androstan-3-ones which are said to be useful in the treatment of DHT-related hyperandrogenic conditions.

However, despite the suggestion in the prior art that hyperandrogenic diseases are the result of a single 5 α -reductase, there are reports regarding the presence of other 5 α -reductase isozymes in both rats and humans. For example, in human prostate, Bruchovsky, et al. (See J. Clin. Endocrinol. Metab. 67, 806-816, 1988) and Hudson (see J. Steroid Biochem. 26, p 349-353, 1987) found different 5 α -reductase activities in the stromal and epithelial fractions. Additionally, Moore and Wilson described two distinct human reductases with peaks of activities at either pH 5.5 or pH 7-9. (See J. Biol. Chem. 251, 19, p. 5895-5900, 1976.)

Recently, Andersson and Russell isolated a cDNA which encodes a rat liver 5 α -reductase (see J. Biol. Chem. 264 pp. 16249-55 (1989)). They found a single mRNA which encodes both the liver and prostatic reductases of rats. The sequence of this rat gene was later used to select a human prostatic cDNA encoding a 5 α -reductase termed "5 α -reductase 1". (See Proc. Nat'l. Acad. Sci. 87, p. 3640-3644, 1990.)

More recently, a second, human prostatic reductase (5 α -reductase 2) has been cloned with properties identified with the more abundant form found in crude human prostatic extracts. (See Nature, 354, p. 159-161, 1991.)

- 4 -

Further, "Syndromes of Androgen Resistance" - The Biology of Reproduction, Vol. 46, p. 168-173 (1992) by Jean O. Wilson indicates that the 5 α -reductase 1 enzyme may be associated with hair follicles.

5 Thus, the art supports the existence of at least two genes for 5 α -reductase and two distinct isozymes of 5 α -reductase in humans. Both forms are present in prostatic tissue in which, 5 α -reductase 2, is the more abundant, and the other isozyme,
10 5 α -reductase 1, is believed to be more abundant in scalp tissue.

In the treatment of hyperandrogenic disease conditions, e.g. benign prostatic hyperplasia (BPH), it would be desirable to have one drug entity which
15 is active against both enzymes 1 and 2 in the prostate to substantially inhibit dihydrotestosterone (DHT) production. Alternatively, it would be desirable to have a drug entity which is highly selective for inhibiting the scalp associated enzyme 5 α -reductase
20 1, for use in treating diseases of the skin and scalp, e.g. acne and alopecia. The drug could also be used in combination with PROSCAR® (finasteride) which is highly selective for the prostatic enzyme 5 α -reductase 2 for combination therapy in the treatment of BPH.

25

SUMMARY OF THE INVENTION

The present invention discloses novel
17-position ester and thioester derivatives of
4-azaandrostan-3-ones and related compounds which are

30

- 5 -

useful for inhibiting the steroid 5 α -reductase enzymes 1 and 2. The compounds are particularly effective in selectively inhibiting the 5 α -reductase 1 associated with the scalp, and dually inhibiting both isozymes 1 and 2 in the oral, parenteral or topical treatment of benign prostatic hyperplasia, acne, female hirsutism, male pattern baldness, androgenic alopecia, prostatitis, and the prevention and treatment of prostatic carcinoma.

DETAILED DESCRIPTION

This invention is concerned with compounds of formula I, and combinations thereof for the selective inhibition of 5 α -reductase 1 and the combined inhibition of 5 α -reductase 1 and 2. Compounds of formula I are defined as follows:

30 wherein a and b are both single bonds and R^2 is hydrogen, or
 a is a double bond, b is a single bond and R^2 is hydrogen, or

- 6 -

a is a single bond, b is a double bond and
R² is absent;

- 5 R¹ is -H, aryl, or -C₁₋₃alkyl unsubstituted or
substituted with aryl and can be the same or
different at each occurrence when n is
greater than 1;
- R³ is -H, methyl, ethyl, -OH, -NH₂ or -SCH₃;
- 10 n is an integer selected from zero through 10;
- X is -O- or -S-; and
- R⁴ is 1) -C₁₋₂₀ alkyl, unsubstituted
or substituted with one or more of:
- a) -OH,
 - b) halo,
 - 15 c) -C₁₋₈ alkoxy,
 - d) -C₁₋₆ alkenyl,
 - e) -CONR⁵R⁵, wherein R⁵ is independently
 - i) -H,
 - 20 ii) -C₁₋₈ alkyl unsubstituted or
substituted with one or more
of R⁷, aryl or heterocycle,
the aryl being unsubstituted
or substituted with one or
more of R⁷ or R⁹,
 - 25 iii) aryl unsubstituted or
substituted with one or more
of R⁷ or R⁹, or
 - iv) heterocycle, unsubstituted or
substituted with one or more
of R⁷ or R⁹,
 - 30 f) -COOR⁶, wherein R⁶ is
 - i) -H,

- 7 -

- 5 ii) $-C_{1-8}$ alkyl unsubstituted or substituted with one or more of R^7 or aryl, the aryl being unsubstituted or substituted with one or more of R^7 or R^9 , or
- iii) aryl, unsubstituted or substituted with one or more of R^7 or R^9 ,
- 10 g) $-S(O)_p-R^5$, wherein p is zero, 1 or 2;
 h) $-N(R^5)_2$,
 i) aryl, unsubstituted or substituted with one or more of aryl, R^7 or R^9 ,
 j) heterocycle, unsubstituted or
15 substituted with one or more of R^7 or R^9 ,
 k) $-C_{3-10}$ cycloalkyl, such as cyclohexyl, norbornyl, or adamantyl, unsubstituted or
20 substituted with one or more of R^7 or R^9 , or
 1) $-CONR^8-CO-NHR^8$, wherein R^8 is $-H$, $-C_{1-8}$ alkyl, benzyl or cyclohexyl,
 2) aryl, unsubstituted or substituted with
25 one or more of aryl, R^7 or R^9 ,
 3) heterocycle or $-C_{3-10}$ cycloalkyl, either of which is unsubstituted or substituted with one or more of R^7 or R^9 ,
30 4) $-NR^5R^5$, or
 5) $-OR^5$;

- 8 -

- R^7 is
 - 1) -OH,
 - 2) -C₁₋₃ alkoxy,
 - 3) -CN,
 - 4) -COOR⁶
 - 5) -C₁₋₈alkyl-COOR⁶
 - 6) -NO₂, or
 - 7) halo; and
 - 8) amino, mono-C₁-C₄alkylamino, di-C₁-C₄-alkylamino;
- R^9 is
 - 1) -C₁₋₈ alkyl, unsubstituted or substituted with one or more of aryl or R^7 ,
 - 2) -CO-A, -C₁₋₈ alkyl-CO-A, -NHCO-A, or -S(O)_p-A, wherein p is defined above and A is
 - a) -H,
 - b) -C₁₋₈ alkyl, unsubstituted or substituted with one or more of
 - i) - R^7 , or
 - ii) aryl, unsubstituted or substituted with one or more of R^7 , or
 - c) aryl, unsubstituted or substituted with one or more of R^7 ,
 - 3) -NHCO-heterocycle,
 - 4) -N(R^{10})₂ or -CON(R^{10})₂ wherein R^{10} is independently, heterocycle or -A,
 - 5) -NHCO-(CH₂)_q-CO-Q, wherein q is 1-4, and Q is -N(R^{10})₂ or -OR¹⁰;

- 9 -

with the provisos that:

when n is 1-10, b is a single bond, R^1 is -H at each occurrence, X is -O-, and R^4 is -C₁₋₆alkyl, R^4 is not substituted with an unsubstituted phenyl ring;

when n is 1-10, b is a single bond, R^1 is -H at each occurrence, and X is -O-, R^4 is not unsubstituted C₅₋₁₀cycloalkyl, unsubstituted phenyl, amino, -C₁₋₈alkyl substituted amino, or -C₁₋₈alkoxy;

when n is zero, X is -O-, a and b are both single bonds and R^3 is -H, then R^4 is not -CH₃; and

when n is 1, R^1 is -CH₃, X is -O-, a and b are both single bonds, and R^3 is -H, then R^4 is not -CH₃;

or a pharmaceutically acceptable salt or ester thereof.

A first preferred embodiment of this invention is represented by compounds of formula II

- 10 -

wherein R^4 is $-C_{1-20}$ alkyl, unsubstituted or substituted with one or more of

-OH, halo, $-C_{1-8}$ alkoxy, $-C_{1-6}$ alkenyl, $-S(O)_p-R^5$,
-N(R^5)₂, aryl unsubstituted or substituted with
5 one or more of aryl, R^7 or R^9 , heterocycle
unsubstituted or substituted with one or more of R^7
or R^9 , or $-C_{3-10}$ cycloalkyl unsubstituted or
substituted with one or more of R^7 or R^9 ,
and X, p, R^5 , R^7 , and R^9 are all as defined in
10 formula I.

A second preferred embodiment of this
invention is represented by compounds of formula II
wherein R^4 is $-C_{1-20}$ alkyl substituted with $-CONR^5R^5$,
15 $-COOR^6$ or $-CONR^8CONHR^8$,
and X, R^5 , R^6 , and R^8 are all as defined in formula
I.

A third preferred embodiment of this
20 invention is represented by compounds of formula II
wherein R^4 is
aryl unsubstituted or substituted with one or
more of aryl, R^7 or R^9 ;
heterocycle unsubstituted or substituted with one
25 or more of R^7 or R^9 ;
 $-C_{3-10}$ cycloalkyl unsubstituted or substituted
with one or more of R^7 or R^9 ;
 $-NR^5R^5$; or $-OR^5$;
and X, R^5 , R^7 , and R^9 are all as defined in formula
30 I.

A fourth preferred embodiment of this
invention is represented by compounds of formula III

- 11 -

wherein R^4 is $-C_{1-20}$ alkyl, unsubstituted or substituted with one or more of

15 $-OH$, halo, $-C_{1-8}$ alkoxy, $-C_{1-6}$ alkenyl, $-S(O)_p-R^5$, $-N(R^5)_2$, aryl unsubstituted or substituted with one or more of aryl, R^7 or R^9 , heterocycle unsubstituted or substituted with one or more of

20 R^7 or R^9 , or $-C_{3-10}$ cycloalkyl unsubstituted or substituted with one or more of R^7 or R^9 , and X , n , p , R^1 , R^5 , R^7 , and R^9 are all as defined in formula I:

25 A fifth preferred embodiment of this invention is represented by compounds of formula III wherein R^4 is $-C_{1-20}$ alkyl substituted with $-CONR^5R^5$, $-COOR^6$ or $-CONR^8CONHR^8$, and X , n , R^1 , R^5 , R^6 , and R^8 are all as defined in

30 formula I.

- 12 -

A sixth preferred embodiment of this invention is represented by compounds of formula III wherein R^4 is

- aryl unsubstituted or substituted with one or
 5 more of aryl; R^7 or R^9 ;
 heterocycle unsubstituted or substituted with one
 or more of R^7 or R^9 ;
 $-C_3-10$ cycloalkyl unsubstituted or substituted
 with one or more of R^7 or R^9 ;
 10 $-NR^5R^5$; or $-OR^5$;
 and X, n, R^1 , R^5 , R^7 , and R^9 are all as defined in
 formula I.

Unless other wise specified, the
 17-substituent is assumed to be in the beta
 15 configuration.

Novel compounds of the present invention
 include but are not limited to the following
 compounds:

20

25

30

20-(11-(ethylthio)undecanoyloxy)-4-methyl-5α-
 4-azapregnan-3-one,

- 13 -

5

10

20-ethoxyacetyloxy-4-methyl-5 α -4-azapregnan-3-one,

15

20

25

17-(12-(isopropylthio)dodecanoyloxy)-4-methyl-
5 α -4-azaandrostan-3-one,

30

- 14 -

20-(12-(isopropylthio)-dodecanoyloxy)-5α-
15 4-azapregn-1-ene-3-one,

17-acetyloxymethyl-4-methyl-5α-4-azaandrost-3-one,
30

- 15 -

- 4-methyl-20-tridecanoyloxy-5 α -4-azapregnan-3-one,
20-t-butylacetyloxy-4-methyl-5 α -4-azapregnan-3-one,
4-methyl-20-trimethylacetyloxy-5 α -4-azapregnan-3-one,
4-methyl-20-(10-undecenoyloxy)-5 α -4-azapregnan-3-one,
5 20-(3,7-dimethyl-6-octenoyloxy)-4-methyl-5 α -aza-
pregnan-3-one,
20-(3-carboxypropionyloxy)-4-methyl-5 α -4-azapregnan-
3-one,
20-(11-(carbomethoxy)undecanoyloxy)-4-methyl-5 α -4-
10 azapregnan-3-one,
20-(3-(carbobenzyloxy)propionyloxy)-4-methyl-5 α -4-
azapregnan-3-one,
20-(1-adamantylacetyloxy)-4-methyl-5 α -4-azapregnan-
3-one
15 4-methyl-20-(2-norbornylacetyloxy)-5 α -4-azapregnan-
3-one,
20-(3,4-dimethoxyphenyl)acetyloxy-4-methyl-5 α -4-aza-
pregnan-3-one,
20-(4-isopropylphenyl)acetyloxy-4-methyl-5 α -4-aza
20 pregnan-3-one
20-(isopropylthio)acetyloxy-4-methyl-5 α -4-aza-
pregnan-3-one,
20-(9-(isopropylthio)nonanoyloxy)-4-methyl-5 α -4-aza-
pregnan-3-one,
25 20-(12-(isopropylthio)dodecanoyloxy)-4-methyl-5 α -4-
azapregnan-3-one,

30

- 16 -

- 20-(11-(ethylsulfinyl)undecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one,
20-(12-(t-butylthio)dodecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one
5 4-methyl-20-(4-(thien-2-yl))butyroyloxy-5 α -4-azapregnan-3-one,
20-trimethylacetyloxy-5 α -4-azapregnan-3-one,
20-(9-(isopropylthio)nonanoyloxy)-5 α -4-azapregnan-3-one,
10 20-(12-(isopropylthio)dodecanoyloxy)-5 α -4-azapregnan-3-one,
20-acetoxymethyl-4-methyl-5 α -4-azapregnan-3-one,
4-methyl-20-(trimethylacetyloxy)methyl-5 α -4-azapregnan-3-one,
15 20-(12-(isopropylthio)dodecanoyloxy)methyl-4-methyl-5 α -4-azapregnan-3-one,
4-methyl-17-trimethylacetyloxymethyl-5 α -4-azaandrostan-3-one,
17-(2-ethylhexanoyloxy)methyl-4-methyl-5 α -4-azaandrostan-3-one,
20 17-(12-(isopropylthio)dodecanoyloxy)methyl-4-methyl-5 α -4-azaandrostan-3-one,
20-trimethylacetyloxy-5 α -4-azapregn-1-ene-3-one,
17B-(benzylaminocarbonyloxy)-4-methyl-5 α -4-azaandrostan-3-one,
25 20-(t-butylaminocarbonyloxy)-4-methyl-5 α -4-azapregnan-3-one,

30

- 17 -

17-(t-butylaminocarbonyloxymethyl)-4-methyl-5 α -
4-azaandrostan-3-one or
17-(methylaminocarbonyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one.

5

Novel compounds of the present invention
further include, but are not limited to the following
compounds:

- 17-(2-furylacetoxyethyl)-4-methyl-5 α -4-azaandrostan-
10 3-one,
17-(4-isopropylphenylacetoxyethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
17-(cyclohexylacetoxyethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
15 17-(3-indolylacetoxyethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
17-(4-methylcyclohexanecarbonyloxymethyl)-4-methyl-
5 α -4-azaandrostan-3-one,
17-(4-(3-indolyl)-butyryloxymethyl)-4-methyl-5 α -4-
20 azaandrostan-3-one,
17-(4-isobutylbenzoyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
17-(acetoxyacetyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
25 17-(6-bromohexanoyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
4-methyl-20-(4-nitrobenzoyloxymethyl)-5 α -4-
azapregnan-3-one,
20-((3-acetamido)benzoyloxy)-4-methyl-5 α -4-
30 azapregnan-3-one,

- 18 -

- 20-(3,4-dimethoxyphenylacetyloxymethyl)-4-methyl-5 α -
4-azapregnan-3-one,
17-(4-ethoxybenzoyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
5 4-methyl-20-(palmitoyloxymethyl)-5 α -4-azapregnan-3-
one,
17-(iminodibenzyl-5-carbonyloxymethyl)-4-methyl-5 α -
4-azaandrostan-3-one,
4-methyl-20-(stearoyloxy)-5 α -4-azapregnan-3-one,
10 17-(3,5-bis-(trifluoromethyl)benzoyloxymethyl)-4-
methyl-5 α -4-azaandrostan-3-one,
17-(3-cyanobenzoyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
20-(heptafluorobutyryloxymethyl)-4-methyl-5 α -4-
15 azapregnan-3-one,
20-(4-benzoylbenzoyloxymethyl)-4-methyl-5 α -4-
azapregnan-3-one,
17-(benzotriazol-5-carbonyloxymethyl)-4-methyl-5 α -4-
azaandrostan-3-one,
20 20-(3,5-difluorobenzoyloxy)-4-methyl-5 α -4-azapregnan-
3-one,
17-(bis-(4-isopropyl)phenyl)acetyloxymethyl-4-methyl-
5 α -4-azaandrostan-3-one,
4-methyl-20-(salicylyloxymethyl)-5 α -4-azapregnan-
25 3-one,
17-((3-hydroxy-4,4,4-trichlorobutyryloxy)methyl)-
4-methyl-5 α -4-azaandrostan-3-one, or
17-(cinnamoyloxymethyl)-4-methyl-5 α -4-azaandrostan-
3-one.

30

- 19 -

Also included within the scope of this invention are pharmaceutically acceptable salts or esters, where a basic or acidic group is present in a compound of formula I, such as on the substituted alkyl, cycloalkyl, aryl or heterocyclic moiety. When an acidic substituent is present, i.e. -COOH, there can be formed the ammonium, sodium, potassium, calcium salt, and the like, for use as the dosage form.

Where a basic group is present, i.e. amino, acidic salts, i.e. hydrochloride, hydrobromide, acetate, pamoate, and the like, can be used as the dosage form.

Also, in the case of the -COOH group being present, pharmaceutically acceptable esters can be employed, e.g. acetate, maleate, pivaloyloxymethyl, and the like, and those esters known in the art for modifying solubility or hydrolysis characteristics for use as sustained release or prodrug formulations.

The compounds of the present invention, may have asymmetric centers and occur as racemates, racemic mixtures and as individual diastereomers, with all isomeric forms being included in the present invention.

When any variable (e.g., aryl, heterocycle, R^1 , R^2 , n, X, etc.) occurs more than one time in any constituent or in formula I, II or III

its definition on each occurrence is independent of its definition at every other occurrence. Also, combinations of substituents and/or variables are permissible only if such combinations result in stable compounds.

- 20 -

As used herein "alkyl" is intended to include both branched- and straight-chain saturated aliphatic hydrocarbon groups having the specified number of carbon atoms (Me is methyl, Et is ethyl, Pr is propyl, Bu is butyl); "alkoxy" represents an alkyl group of indicated number of carbon atoms attached through an oxygen bridge. "Cycloalkyl" is intended to include saturated mono-, bi- and tricyclic ring groups, such as cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl (Cyh), cycloheptyl, norbornanyl and adamantyl. "Alkenyl" is intended to include hydrocarbon groups of either a straight or branched configuration with one or more carbon-carbon double bonds which may occur in any stable point along the chain, such as ethenyl, propenyl, butenyl, pentenyl, and the like. "Halo", as used herein, means fluoro, chloro, bromo and iodo.

As used herein, with exceptions as noted, "aryl" is intended to mean phenyl (Ph) or naphthyl.

The term heterocycle or heterocyclic, as used herein except where noted, represents a stable 5- to 7-membered monocyclic heterocyclic ring which is either saturated or unsaturated, and which consists of carbon atoms and from one to three heteroatoms selected from the group consisting of N, O and S, and wherein the nitrogen and sulfur heteroatoms may optionally be oxidized, and the nitrogen heteroatom may optionally be quaternized, and including any bicyclic group in which any of the above-defined heterocyclic rings is fused to a benzene ring. The heterocyclic ring may be attached

- 21 -

at any heteroatom or carbon atom which results in the creation of a stable structure. Examples of such heterocyclic elements include piperidinyl, piperazinyl, 2-oxopiperazinyl, 2-oxopiperidinyl, 5 2-oxopyrrolodiny1, 2-oxoazepinyl, azepinyl, pyrrolyl, 4-piperidonyl, pyrrolidinyl, pyrazolyl, pyrazolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyridyl, pyrazinyl, pyrimidinyl, pyridazinyl, oxazolyl, oxazolidinyl, isoxazolyl, 10 isoxazolidinyl, morpholinyl, thiazolyl, thiazolidinyl, isothiazolyl, quinuclidinyl, isothiazolidinyl, indolyl, quinolinyl, isoquinolinyl, benzimidazolyl, thiadiazoyl, benzopyranyl, benzothiazolyl, benzoxazolyl, furyl, tetrahydrofuryl, 15 tetrahydropyranyl, thienyl, benzothienyl, thiamorpholinyl, thiamorpholinyl sulfoxide, thiamorpholinyl sulfone, and oxadiazolyl. Morpholino is the same as morpholinyl. Preferred heterocycles are piperidinyl, 2-oxopyrrolodiny1, pyrrolyl, 20 pyrazolyl, imidazolyl, pyridyl, pyrazinyl, pyrimidinyl, pyridazinyl, oxazolyl, isoxazolyl, morpholinyl, thiazolyl, isothiazolyl, quinuclidinyl, indolyl, quinolinyl, isoquinolinyl, benzimidazolyl, thiadiazoyl, benzothiazolyl, benzoxazolyl, furyl, 25 tetrahydrofuryl, thienyl, and benzothienyl.

"M.p." or "mp" is an abbreviation for melting point; "m.w." or "mw" is an abbreviation for molecular weight.

- 22 -

The compounds of the present invention are made by methods well known to those skilled in the art. The compounds of this invention are generally made from a steroid alcohol starting material, represented by formula (i)

wherein a and b are both single bonds and R² is hydrogen, or

a is a double bond, b is a single bond and R² is hydrogen, or

a is a single bond, b is a double bond and R² is absent;

R¹ is -H, aryl, or C₁₋₃alkyl unsubstituted or substituted with aryl and where n is greater than 1, R¹ can be the same or different; R³ is -H, methyl or ethyl; and n is an integer from zero through 10.

Methods of making starting alcohols of formula (i) are well known to those skilled in the art, and are described, for example, in the following publications: Rasmusson, G.H. *et al.*, J. Med. Chem., 29, 2298-2315 (1986); Rasmusson, G.H. *et al.*, J. Med. Chem., 27, 1690-1701 (1984).

- 23 -

Furthermore, the starting 4-azasteroid-20-alcohols of Formula (i) may be made by several methods well known to those skilled in the art. For example, 4-azasteroids containing a 17-carbonyl group (e.g. carboxaldehyde) may be reacted with the appropriate organo-metallic reagent to yield the corresponding secondary alcohol, while reduction yields the primary alcohol. Also, an appropriate 17-ketone may be reduced (e.g. with sodium borohydride) to the desired alcohol. The above mentioned ketones may be made by several methods well known in the art; one particularly useful method is that of A. Bhattacharya et al., Synthetic Communications 20(17), 2683-2690 (1990), in which an activated carbonyl compound is reacted with a suitable Grignard reagent to give the desired ketone. Other activated carbonyl compounds (e.g. pyridine thioesters) may also be used.

These alcohol functions may be constructed both before and after the formation of the 4-aza moiety.

One method of preparing compounds of formula I is to condense the starting steroid alcohol with an acid of formula (ii)

under conditions known to those skilled in the art, e.g., in an appropriate solvent such as CH_2Cl_2 , in the presence of 4-(dimethylamino)-pyridine (DMAP) and N,N'-dicyclohexylcarbodiimide (DCC).

- 24 -

Another method of preparing compounds of formula I is to combine the starting alcohol (i) with an acid chloride of formula (iii) or acid anhydride or mixed anhydride of formula (iv)

5

under conditions known to those skilled in the art, e.g. under dry conditions using an appropriate solvent such as CH_2Cl_2 at e.g. reduced temperature, such as about 0°C , in the presence of a base such as pyridine.

Carbamate derivatives of formula I can be prepared by reacting the starting alcohol (i) with an isocyanate compound, such as benzyl isocyanate or t-butyliisocyanate for example, under conditions known to those skilled in the art, e.g., under dry conditions in an appropriate solvent such as benzene, in the presence of a base such as pyridine or 1,4-diazabicyclo[2.2.2]octane, or in the case of a hindered isocyanate such as t-butyliisocyanate, 1,8-diazabicyclo[5.4.0]undec-7-ene (DBU), with heating e.g. to $60^\circ\text{-}70^\circ\text{C}$, or at room temperature.

The thiol esters may be conveniently prepared from the corresponding alcohol via the literature procedure described in Tetrahedron Letters, 22 (1981) pp. 3119-3122, that is, the alcohol and a thiolacid are reacted together in the presence of the preformed adduct from triphenylphosphine and diisopropyl azodicarboxylate.

30

- 25 -

Alternatively, the free thiol obtained from these thiolesters via standard saponification or reduction methods may then be acylated via standard procedures to obtain other thiolesters.

5 The variable "R⁴" used in the above synthetic method descriptions is defined in formula I, and is independently defined at each occurrence in formula (iv).

10 Accordingly, the present invention is particularly concerned with providing a method of treating the hyperandrogenic conditions of androgenic alopecia, acne vulgaris, seborrhea, benign prostatic hyperplasia, prostatitis, the prevention and/or treatment of prostatic carcinoma, by oral,
15 parenteral or topical administration, of the novel compounds of the present invention.

 The present invention is thus also concerned with providing suitable topical, oral and parenteral pharmaceutical formulations for use in the novel
20 methods of treatment of the present invention.

 The compositions containing the compounds of the present invention as the active ingredient for use in the treatment of e.g., benign prostatic hypertrophy, prostatitis, and prostatic carcinoma,
25 and hyperandrogenic conditions can be administered in a wide variety of therapeutic dosage forms in conventional vehicles for systemic administration, as, for example, by oral administration in the form of tablets, capsules, solutions, or suspensions, of
30 by injection. The daily dosage of the products may be varied over a wide range varying from 0.5 to 1,000

- 26 -

mg per adult human/per day. The compositions are preferably provided in the form of scored tablets containing 0.5, 1.0, 2.5, 5.0, 10.0, 15.0, 25.0, and 50.0 milligrams of the active ingredient for the symptomatic adjustment of the dosage to the patient to be treated. An effective amount of the drug is ordinarily supplied at a dosage level of from about 0.002 mg. to about 50 mg./kg. of body weight per day. Preferably the range is from about 0.01 mg. to 7 mg./kgs. of body weight per day. These dosages are well below the toxic dose of the product. Capsules containing the product of this invention can be prepared by mixing an active compound of the present invention with lactose and magnesium stearate, calcium stearate, starch, talc, or other carriers, and placing the mixture in gelatin capsule. Tablets may be prepared by mixing the active ingredient with conventional tableting ingredients such as calcium phosphate, lactose, corn starch or magnesium stearate. The liquid forms in suitably flavored suspending or dispersing agents such as the synthetic and natural gums, for example, tragacanth, acacia, methylcellulose and the like. Other dispersing agents which may be employed include glycerin and the like. For parenteral administration, sterile suspensions and solutions are desired. Isotonic preparations which generally contain suitable preservative are employed when intravenous administration is desired.

30

- 27 -

For the treatment of androgenic alopecia, acne vulgaris, seborrhea, female hirsutism, the compounds of the present invention are administered in a pharmaceutical composition comprising the active compound in combination with a pharmacologically acceptable carrier adapted for topical administration. Parenteral or oral administration are also applicable. These topical pharmaceutical compositions may be in the form of a cream, ointment, gel or aerosol formulation adapted for application to the skin. These topical pharmaceutical compositions containing the compounds of the present invention ordinarily include about 0.1% to 15%, preferably about 5%, of the active compound, in admixture with about 95% of vehicle.

The following examples are illustrative of representative embodiments of this invention and should not be construed to be limits on the scope or spirit of the instant invention.

The fast atom bombardment (FAB) and electron impact (EI) mass spectral (MS) values are reported as molecular ion peaks and are indicated as either M^+ , $M+1$, $M-1$ or $M+2$, being the molecular weight (mw), the molecular weight plus one atomic mass unit, the molecular weight minus one atomic mass unit, or the molecular weight plus two atomic mass units.

The ^1H nuclear magnetic resonance (NMR) data was taken at 200 or 400 MHz and is tabulated for unique proton values of each compound at the end of the Examples.

30

- 28 -

Example 1Preparation of 20-(11-(ethylthio)undecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one

5 To a stirred solution of 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one (0.66 g, 2.0 mM), 11-ethylthio-undecanoic acid (0.493 g, 2.0 mM), and 4-(dimethyl-amino)-pyridine (0.242 g, 2.0 mM) in methylene chloride (25 mL) was added N,N'-dicyclohexylcarbodiimide (0.48 g, 2.3 mM) in methylene chloride (3 mL
10 plus 2x3 mL rinses) at room temperature. After stirring overnight two times, the mixture was filtered from the precipitated dicyclohexylurea and concentrated, and the residue flash chromatographed
15 on silica gel using ethyl acetate as eluant to yield the title compound as a thick oil. MS M⁺ calculated for C₃₄H₅₉NO₃S, mw = 561.90; observed m/e 562.

Example 2

20

Preparation of 20-ethoxyacetyloxy-4-methyl-5 α -4-azapregnan-3-one

Employing substantially the same procedure as described in Example 1, but substituting
25 ethoxyacetic acid in place of the ethylthioundecanoic acid used therein, the title compound is obtained.

30

- 29 -

Example 3

Preparation of 17-(12-(isopropylthio)dodecanoyloxy)-4-methyl-5 α -4-azaandrostan-3-one

5

Employing substantially the same procedure as described in Example 1, but substituting 17-hydroxy-4-methyl-5 α -4-azaandrostan-3-one and 12-(isopropylthio)dodecanoic acid for the 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one and 11-ethylthioundecanoic acid, respectively, used therein, the title compound was obtained. MS M⁺ calculated for C₃₄H₅₉NO₃S, mw = 561.92; observed m/e 561.

15

Example 4

Preparation of a) 20-(9-(isopropylthio)nonanoyloxy)-5 α -4-azapregnan-3-one and

b) 20-(12-(isopropylthio)dodecanoyloxy)-5 α -4-azapregn-1-ene-3-one

Employing substantially the same procedure as described in Example 1, but substituting the steroid alcohol and acid starting materials used therein with the following compounds, both of the title compounds were obtained:

Title compound a): 20-hydroxy-5 α -4-azapregnan-3-one and 9-(isopropylthio)nonanoic acid. MS M⁺ calculated for C₃₂H₅₅NO₃S, mw = 533.85; observed m/e 533;

30

- 30 -

Title compound b): 20-hydroxy-5 α -4-azapregn-1-ene-3-one and 12-(isopropylthio)dodecanoic acid. MS M⁺ calculated for C₃₅H₅₉NO₃S, mw = 573.92; observed m/e 573.

5

Example 5

Compounds of formula 3, below, were made employing substantially the same procedure as described in Example 1, but substituting the compounds of formula 1 and 2, below, in place of the 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one and 11-ethylthioundecanoic acid respectively, used therein.

Example 6Preparation of 4-methyl-20-(10-undecenoyloxy)-5 α -4-azapregnan-3-one

5.

To a solution of 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one (0.167 g, 0.5 mM) and pyridine (0.1 mL) in anhydrous methylene chloride (4.5 mL) at ice-bath temperatures was added 10-undecenoyl chloride (0.13 mL, 0.6 mM) dropwise. After 10 minutes, the reaction mixture was allowed to warm to room temperature and stir overnight. After diluting further with methylene chloride the mixture was washed with dilute hydrochloric acid, water, and brine, and dried (Na₂SO₄). The residue obtained from concentration of the filtered solution was flash chromatographed on silica gel using ethyl acetate as eluant to give the title compound as a glaze. MS M⁺ calculated for C₃₂H₅₃NO₃, mw = 499.78; observed m/e 499.

20

Example 7

Compounds of formula 6, below, were made employing substantially the same procedure as described in Example 6, but substituting the compounds of formula 4 and 5, below, in place of the 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one and 10-undecenoyl chloride, respectively, used therein.

20

Example 8

Preparation of 20-trimethylacetyloxy-5 α -4-azapregn-1-ene-3-one

- 25 Employing substantially the same procedure as described in Example 6, but substituting 20-hydroxy-5 α -4-azapregn-1-ene-3-one and trimethylacetyl chloride for the 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one and 10-undecenoyl chloride,
30 respectively, used therein, the title compound was obtained. MS M^{-1} calculated for $C_{25}H_{39}NO_3$, $mw = 402.53$; observed m/e 401.

- 38 -

Example 9Preparation of 20-(11-(ethylsulfinyl)undecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one

5 To a stirred solution of 20-(11-(ethylthio)-undecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one (0.056 g, 0.1 mM) in acetone (5 mL) at room temperature was added a solution of sodium periodate (0.033 mg, 0.154mM) in water (3 drops). After
10 prolonged stirring with additional portions of the periodate added (0.046 g total) over 3 days, the solvents were removed in vacuo, and the residue extracted with methylene chloride. The methylene chloride was removed in vacuo, and the resulting
15 residue was flash chromatographed on silica gel (30% acetone/methylene chloride eluant) to give the title compound as a glaze. MS M⁺ calculated for C₃₄H₅₉NO₄S, mw = 577.90; observed m/e 577.

20

Example 10Preparation of 17 β -(benzylaminocarbonyloxy)-4-methyl-5 α -4-azaandrostan-3-one

25 To a solution of 17 β -hydroxy-4-methyl-5 α -4-azaandrostan-3-one (61 mg) in pyridine (0.60 ml) was added benzyl isocyanate (54 mg, 0.40 mmol). The mixture was stirred at 60-70°C under N₂ for 18 hr and pumped in vacuo to remove pyridine. The residue was purified using a silica gel plate (2000 μ) developed
30 with ethyl acetate (R_f = 0.37, run in EtOAc) to give the title compound; m.p. is 216-217°C.

- 39 -

Example 11

Preparation of 20-(3-carboxypropionyloxy)-4-methyl-
5 α -4-azapregnan-3-one

5 20-(3-(Carbobenzyloxy)propionyloxy)-4-methyl-
5 α -4-azapregnan-3-one (0.05 g, 0.095 mM) was reduced
with hydrogen in ethyl acetate in the presence of 5%
palladium on carbon, to obtain the title compound.
MS M⁺¹ calculated for C₂₅H₃₉NO₅, mw=433.64; observed
10 m/e 434.

Example 12

Preparation of 20-(acetylthiomethyl)-4-methyl-5 α -
15 4-azapregnan-3-one

By reacting 20-(hydroxymethyl)-4-methyl-5 α -
4-azapregnan-3-one with thiolacetic acid as per the
procedure of Tetrahedron Letters 22 (1981) pp.
3119-3122, the title compound is obtained.

20

Example 13

Preparation of 17-(t-butylaminocarbonyloxymethyl)-
4-methyl-5 α -4-azaandrostan-3-one

25

To a stirred solution of 17-(hydroxymethyl)-
4-methyl-5 α -4-azaandrostan-3-one (0.048 g, 0.15 mM)
in dried benzene (5 mL) was added at room temperature
t-butylisocyanate (0.03 mL, 0.23mM) followed by
30 1,8-diazabicyclo[5.4.0]undec-7-ene (DBU) (0.023 mL,
0.15 mM). After stirring for two days, the volatiles

- 40 -

were removed in vacuo and the residue flash chromatographed on silica gel using ethyl acetate as eluant to give the title compound as a white solid. MS M^{+1} calculated for $C_{25}H_{42}N_2O_3$, mw = 418.55; observed m/e 419.

Example 14

Preparation of 20-(t-butylaminocarbonyloxy)-4-methyl-5 α -4-azapregnan-3-one

Employing substantially the same procedure as described in Example 13, but substituting 20-hydroxy-4-methyl-5 α -4-azapregnan-3-one for the steroid alcohol used therein, the title compound was obtained. MS M^{+1} calculated for $C_{26}H_{44}N_2O_3$, mw = 432.65; observed m/e 433.

Example 15

Preparation of 17-(methylaminocarbonyloxymethyl)-4-methyl-5 α -4-azaandrostan-3-one

Employing substantially the same procedure as described in Example 10, but substituting methyl isocyanate and 17-(hydroxymethyl)-4-methyl-5 α -4-azaandrostan-3-one for the benzyl isocyanate and steroid alcohol, respectively, used therein, the title compound was obtained. MS M^{+2} calculated for $C_{22}H_{36}N_2O_3$, mw = 376.54; observed m/e 378.

30

- 41 -

Also included with the scope of this invention are 4-N-X analogs where X is OH, NH₂ or SCH₃. The 4-N-OH and 4-N-NH₂ derivatives can be made by incorporating hydroxylamine or hydrazine, respectively, in place of methyl amine in the seco acid ring A closure for the starting androstanes herein as described in J. Med. Chem. 29, 2998-2315 (1986) by Rasmusson et al. Further, reaction of the anion of the saturated 4-N-H androstanes, wherein the anion is generated from the 4-NH precursor by sodium hydride, and methylsulphenyl chloride can produce the corresponding 4-N-SCH₃ derivative. Thus, substituent R³ on the 4-N position also includes OH, NH₂ and SCH₃.

30

- 44 -

Novel compounds of the present invention further include, but are not limited to, the following compounds:

- 5 20-(t-butylaminocarbonyloxy)-4-methyl-5- α -4-aza-
pregnan-3-one,
- 20-(isopropylaminocarbonyloxy)-4-methyl-5- α -4-aza-
pregnan-3-one,
- 10 17-((2-ethylphenylamino)carbonyloxymethyl)-4-methyl-
5- α -4-azaandrostan-3-one,
- 4-methyl-20-(methylaminocarbonyloxy)-5- α -4-aza-
15 pregnan-3-one, and
- 24-(t-butylaminocarbonyloxy)-4-methyl-5- α -4-aza-
cholan-3-one.

20 These compounds can be prepared using
substantially the same procedures as described in
Example 14, using the appropriate starting materials.

25 Furthermore, the present invention discloses
compounds of formula I-a, useful for dually
inhibiting both steroid 5 α -reductase enzymes 1 and 2
and selectively inhibiting 5 α -reductase 1,

30

- 45 -

wherein:

- 15 (I) a is single bond;
 R^1 is H;
 R^3 is -H, methyl, ethyl, -OH, -NH₂, or -SCH₃;
 n is an integer selected from 1 through 10; and
 R^4 is
- 20 1) -C₁₋₆ alkyl substituted with an unsubstituted phenyl ring,
 2) unsubstituted C₅₋₁₀ cycloalkyl,
 3) unsubstituted phenyl,
 4) amino,
 5) -C₁₋₈ alkyl substituted amino, or
 25 6) -C₁₋₈ alkoxy;

(II) a is a single bond;

- R^3 is -H;
 n is zero; and
 30 R^4 is -CH₃; or

- 46 -

(III) a is a single bond;

R¹ is -CH₃;

R³ is -H;

n is 1; and

5. R⁴ is -CH₃;

or a pharmaceutically acceptable salt or ester thereof.

10

BIOLOGICAL ASSAYS

Preparation of Human prostatic and scalp 5α-reductases

Samples of human tissue were pulverized
15 using a freezer mill and homogenized in 40 mM
potassium phosphate, pH 6.5, 5 mM magnesium sulfate,
25 mM potassium chloride, 1 mM phenylmethylsulfonyl
fluoride, 1 mM dithiothreitol (DTT) containing 0.25 M
sucrose using a Potter-Elvehjem homogenizer. A crude
20 nuclear pellet was prepared by centrifugation of the
homogenate at 1,500xg for 15 min. The crude nuclear
pellet was washed two times and resuspended in two
volumes of buffer. Glycerol was added to the
resuspended pellet to a final concentration of 20%.
25 The enzyme suspension was frozen in aliquots at
-80°C. The prostatic and scalp reductases were
stable for at least 4 months when stored under these
conditions.

30

- 47 -

5 α -reductase assay.

The reaction mixture contained in a final volume of 100 μ l is: 40 mM buffer (human scalp, potassium phosphate, pH 6.5; human prostatic 5. 5 α -reductase, sodium citrate, pH 5.5), 0.3-10 μ M ¹⁴C-T (or ³H-T) ("T" stands for testosterone), 1 mM DTT, and 500 μ M NADPH. Typically, the assay was initiated by the addition of 50-100 μ g prostatic homogenate or 75-200 μ g scalp homogenate and 10 incubated at 37°C. After 10-50 min the reaction was quenched by extraction with 250 μ l of a mixture of 70% cyclohexane: 30% ethyl acetate containing 10 μ g each DHT and T. The aqueous and organic layers were separated by centrifugation at 14,000 rpm in an 15 Eppendorf microfuge. The organic layer was subjected to normal phase HPLC (10 cm Whatman partisil 5 silica column equilibrated in 1 ml/min 70% cyclohexane: 30% ethyl acetate; retention times: DHT, 6.8-7.2 min; androstanediol, 7.6-8.0 min; T, 9.1-9.7 min). The 20 HPLC system consisted of a Waters Model 680 Gradient System equipped with a Hitachi Model 655A auto-sampler, Applied Biosystems Model 757 variable UV detector, and a Radiomatic Model A120 radioactivity analyzer. The conversion of T to DHT was monitored 25 using the radioactivity flow detector by mixing the HPLC effluent with one volume of Flo Scint 1 (Radiomatic). Under the conditions described, the production of DHT was linear for at least 25 min. The only steroids observed with the human prostate 30 and scalp preparations were T, DHT and androstanediol.

- 48 -

Stumptail macaque protocol

5 The following protocol is utilized with the stumptail macaque monkey to demonstrate the effect of compounds of the present invention for promoting hair growth.

10 Twenty-one male stumptail macaque monkeys of species Macaca speciosa are assigned to vehicle control and drug treatment groups on the basis of baseline hair weight data. This assignment procedure is necessary to insure that the average baseline hair growth for each control and experimental group is comparable. The control and drug treatment groups are as follows:

- 15
1. Topical 50:30:20 vehicle (N = 6)
 2. Oral 5 α -reductase and topical 50:30:20 vehicle (N = 5)
 3. Oral placebo (N = 5)
 4. 5 α -reductase in vehicle (N = 5)
- 20

The vehicle consists of 50% propylene glycol, 30% ethanol and 20% water. A 100 mM concentration of topical 5 α -reductase is formulated in this vehicle. The same 5 α -reductase is

25 administered as an oral dose of 0.5 mg per monkey. Immediately prior to the dosing phase of the study, hair is removed from a 1 inch square area (identified by four tatoos) in the center of the balding scalp. This hair collection is the baseline hair growth

30 determination prior to the beginning of treatment. Approximately 250 μ L of vehicle and 5 α -reductase in vehicle is prepared and topically administered to the

- 49 -

tattooed area of the scalp. The selected
5 5α -reductase and placebo is ingested by the monkeys
at the same time as the topical doses are
administered. The monkeys are dosed once per day,
seven days per week for twenty weeks.

At four week intervals throughout the dosing
phase of the study, each monkey is shaved and the
hair is collected and weighed. The body weight data
(at baseline and during assay) is analyzed by the
10 monparametric Wilcoxon rank-sum test. Differences
are significant at $p < 0.05$. Hair weight data at each
week collection for vehicle, placebo and treatment
groups are expressed as the change from baseline.
Statistical analysis is performed on the rank of the
15 data to show overall differences among groups at each
four week collection.

While the invention has been described and
illustrated with reference to certain preferred
embodiments thereof, those skilled in the art will
20 appreciate that various changes, modifications and
substitutions can be made therein without departing
from the spirit and scope of the invention. For
example, effective dosages other than the preferred
dosages as set forth herein above may be applicable
25 as a consequence of variations in the responsiveness
of the mammal being treated for any of the
indications for the compounds of the invention
indicated above. Likewise, the specific
pharmacological responses observed may vary according
30 to and depending upon the particular active compound
selected or whether there are present pharmaceutical
carriers, as well as the type of formulation and mode

- 50 -

of administration employed, and such expected variations or differences in the results are contemplated in accordance with the objects and practices of the present invention. It is intended, therefore, that the invention be limited only by the scope of the claims which follow and that such claims be interpreted as broadly as is reasonable.

10

15

20

25

30

- 51 -

WHAT IS CLAIMED IS:

1. A compound of formula I

5

10

15

wherein *a* and *b* are both single bonds and R^2 is hydrogen, or
a is a double bond, *b* is a single bond and R^2 is hydrogen, or
a is a single bond, *b* is a double bond and R^2 is absent;

R^1 can be the same or different at each occurrence when *n* is greater than 1 and is selected from: -H, aryl, or -C₁₋₃alkyl unsubstituted or substituted with aryl;
 R^3 is -H, methyl, ethyl, -OH, -NH₂, or -SCH₃;
n is an integer selected from zero through 10;
X is -O- or -S-; and
 R^4 is 1) -C₁₋₂₀ alkyl, unsubstituted or substituted with one or more of:
 a) -OH,
 b) halo,
 c) -C₁₋₈ alkoxy,
 d) -C₁₋₆ alkenyl,

- 52 -

e) $-\text{CONR}^5\text{R}^5$, wherein R^5 is independentlyi) $-\text{H}$,ii) $-\text{C}_{1-8}$ alkyl unsubstituted or substituted with one or more of R^7 , aryl or heterocycle, the aryl being unsubstituted or substituted with one or more of R^7 or R^9 ,iii) aryl unsubstituted or substituted with one or more of R^7 or R^9 , oriv) heterocycle, unsubstituted or substituted with one or more of R^7 or R^9 ,f) $-\text{COOR}^6$, wherein R^6 isi) $-\text{H}$,ii) $-\text{C}_{1-8}$ alkyl unsubstituted or substituted with one or more of R^7 or aryl, the aryl being unsubstituted or substituted with one or more of R^7 or R^9 , oriii) aryl, unsubstituted or substituted with one or more of R^7 or R^9 ,g) $-\text{S}(\text{O})_p-\text{R}^5$, wherein p is zero, 1 or 2;h) $-\text{N}(\text{R}^5)_2$,i) aryl, unsubstituted or substituted with one or more of aryl, R^7 or R^9 ,j) heterocycle, unsubstituted or substituted with one or more of R^7 or R^9 ,

- 53 -

k) $-C_{3-10}$ cycloalkyl, unsubstituted or substituted with one or more of R^7 or R^9 , or

1) $-CONR^8-CO-NHR^8$, wherein R^8 is $-H$,

$-C_{1-8}$ alkyl, benzyl or cyclohexyl,

2) aryl, unsubstituted or substituted with one or more of aryl, R^7 or R^9 ,

3) heterocycle or $-C_{3-10}$ cycloalkyl, either of which is unsubstituted or substituted with one or more of R^7 or R^9 ,

4) $-NR^5R^5$, or

5) $-OR^5$;

15 R^7 is

1) $-OH$,

2) $-C_{1-3}$ alkoxy,

3) $-CN$,

4) $-COOR^6$

5) $-C_{1-8}$ alkyl- $COOR^6$

6) $-NO_2$, or

7) halo; and

8) amino, mono C_1-C_4 alkylamino, di- C_1-C_4 -alkylamino;

25 R^9 is

1) $-C_{1-8}$ alkyl, unsubstituted or substituted with one or more of aryl or R^7 ,

2) $-CO-A$, $-C_{1-8}$ alkyl- $CO-A$, $-NHCO-A$, or $-S(O)_p-A$, wherein p is defined above and A is

a) $-H$,

30

- 54 -

b) -C₁₋₈ alkyl, unsubstituted or substituted with one or more of

i) -R⁷, or

ii) aryl, unsubstituted or substituted with one or more of R⁷, or

c) aryl, unsubstituted or substituted with one or more of R⁷,

3) -NECO-heterocycle,

4) -N(R¹⁰)₂ or -CON(R¹⁰)₂ wherein R¹⁰ is independently, heterocycle or -A,

5) -NECO-(CH₂)_q-CO-Q, wherein q is 1-4, and Q is -N(R¹⁰)₂ or -OR¹⁰;

with the provisos that:

when n is 1-10, b is a single bond, R¹ is -H at each occurrence, X is -O-, and R⁴ is -C₁₋₆alkyl, R⁴ is not substituted with an unsubstituted phenyl ring;

when n is 1-10, b is a single bond, R¹ is -H at each occurrence, and X is -O-, R⁴ is not unsubstituted C₅₋₁₀cycloalkyl, unsubstituted phenyl, amino, -C₁₋₈alkyl substituted amino, or -C₁₋₈alkoxy;

when n is zero, X is -O-, a and b are both single bonds and R³ is -H, then R⁴ is not -CH₃; and

when n is 1, R¹ is -CH₃, X is -O-, a and b are both single bonds, and R³ is -H, then R⁴ is not -CH₃;

or a pharmaceutically acceptable salt or ester thereof.

- 55 -

2. The compound of Claim 1 having structural formula II

15 3. The compound of Claim 2 wherein R^4 is $-C_{1-20}$ alkyl, unsubstituted or substituted with one or more of

20 $-OH$, halo, $-C_{1-8}$ alkoxy, $-C_{1-6}$ alkenyl, $-S(O)_p-R^5$, $-N(R^5)_2$, aryl unsubstituted or substituted with one or more of aryl, R^7 or R^9 , heterocycle unsubstituted or substituted with one or more of R^7 or R^9 , or $-C_{3-10}$ cycloalkyl unsubstituted or substituted with one or more of R^7 or R^9 .

25 4. The compound of Claim 2 wherein R^4 is $-C_{1-20}$ alkyl substituted with $-CONR^5R^5$, $-COOR^6$ or $-CONR^8CONHR^8$.

30 5. The compound of Claim 2 wherein R^4 is aryl unsubstituted or substituted with one or more of aryl, R^7 or R^9 ; heterocycle unsubstituted or substituted with one or more of R^7 or R^9 ;

- 56 -

-C₃-10 cycloalkyl unsubstituted or substituted
with one or more of R⁷ or R⁹;
-NR⁵R⁵; or -OR⁵.

5. 6. The compound of Claim 1 having
structural formula III

7. The compound of Claim 6 wherein R⁴ is
-C₁-20 alkyl, unsubstituted or substituted with one
20 or more of

-OH, halo, -C₁-8alkoxy, -C₁-6alkenyl, -S(O)_p-R⁵,
-N(R⁵)₂, aryl unsubstituted or substituted with
one or more of aryl, R⁷ or R⁹, heterocycle
25 unsubstituted or substituted with one or more of
R⁷ or R⁹, or -C₃-10 cycloalkyl unsubstituted or
substituted with one or more of R⁷ or R⁹.

8. The compound of Claim 6 wherein R⁴ is
30 -C₁-20 alkyl substituted with -CONR⁵R⁵, -COOR⁶ or
-CONR⁸CONER⁸.

- 57 -

9. The compound of Claim 6 wherein R⁴ is aryl unsubstituted or substituted with one or more of aryl, R⁷ or R⁹;

heterocycle unsubstituted or substituted with one
5 or more of R⁷ or R⁹;

-C₃₋₁₀ cycloalkyl unsubstituted or substituted with one or more of R⁷ or R⁹;

-NR⁵R⁵; or -OR⁵.

10. A compound selected from the group consisting of:

20-(11-(ethylthio)undecanoyloxy)-4-methyl-5α-4-azapregnan-3-one,

15 20-ethoxyacetyloxy-4-methyl-5α-4-azapregnan-3-one,
17-(12-(isopropylthio)dodecanoyloxy)-4-methyl-5α-4-azaandrostan-3-one,

20-(12-(isopropylthio)-dodecanoyloxy)-5α-4-azapregn-1-ene-3-one,

20 17-acetyloxymethyl-4-methyl-5α-4-azaandrostan-3-one,
4-methyl-20-tridecanoyloxy-5α-4-azapregnan-3-one,
20-t-butylacetyloxy-4-methyl-5α-4-azapregnan-3-one,
4-methyl-20-trimethylacetyloxy-5α-4-azapregnan-3-one,
4-methyl-20-(10-undecenoyloxy)-5α-4-azapregnan-3-one,

25 20-(3,7-dimethyl-6-octenoyloxy)-4-methyl-5α-aza-pregnan-3-one,

20-(3-carboxypropionyloxy)-4-methyl-5α-4-azapregnan-3-one,

30 20-(11-(carbomethoxy)undecanoyloxy)-4-methyl-5α-4-azapregnan-3-one,

20-(3-(carbobenzyloxy)propionyloxy)-4-methyl-5α-4-azapregnan-3-one,

20-(1-adamantylacetyloxy)-4-methyl-5α-4-azapregnan-3-one

- 58 -

- 4-methyl-20-(2-norbornylacetyloxy)-5 α -4-azapregnan-3-one,
20-(3,4-dimethoxyphenyl)acetyloxy-4-methyl-5 α -4-azapregnan-3-one,
5 20-(4-isopropylphenyl)acetyloxy-4-methyl-5 α -4-azapregnan-3-one
20-(isopropylthio)acetyloxy-4-methyl-5 α -4-azapregnan-3-one,
20-(9-(isopropylthio)nonanoyloxy)-4-methyl-5 α -4-azapregnan-3-one,
10 20-(12-(isopropylthio)dodecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one,
20-(11-(ethylsulfinyl)undecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one,
15 20-(12-(t-butylthio)dodecanoyloxy)-4-methyl-5 α -4-azapregnan-3-one
4-methyl-20-(4-thien-2-yl)butyryloxy-5 α -4-azapregnan-3-one,
20-trimethylacetyloxy-5 α -4-azapregnan-3-one,
20 20-(9-(isopropylthio)nonanoyloxy)-5 α -4-azapregnan-3-one,
20-(12-(isopropylthio)dodecanoyloxy)-5 α -4-azapregnan-3-one,
20-acetoxymethyl-4-methyl-5 α -4-azapregnan-3-one,
25 4-methyl-20-(trimethylacetyloxy)methyl-5 α -4-azapregnan-3-one,
20-(12-(isopropylthio)dodecanoyloxy)methyl-4-methyl-5 α -4-azapregnan-3-one,
4-methyl-17-trimethylacetyloxymethyl-5 α -4-azaandrostan-3-one,
30 17-(2-ethylhexanoyloxy)methyl-4-methyl-5 α -4-azaandrostan-3-one,

- 59 -

17-(12-(isopropylthio)dodecanoyloxy)methyl-4-methyl-
 5 α -4-azaandrostan-3-one,
 17B-(benzylaminocarbonyloxy)-4-methyl-5 α -4-
 azaandrostan-3-one, and
 20-trimethylacetyloxy-5 α -4-azapregn-1-ene-3-one,
 or a pharmaceutically acceptable salt or ester
 thereof.

11. A compound of formula I-a

wherein:

(I) a is a single or double bond;

R^1 is -H;

25 R^3 is -H, methyl, ethyl, -OH, -NH₂, or -SCH₃;

n is an integer selected from 1 through 10; and

R^4 is

- 1) -C₁₋₆ alkyl substituted with an unsubstituted phenyl ring,
- 2) unsubstituted C₅₋₁₀ cycloalkyl,
- 3) unsubstituted phenyl,
- 4) amino,
- 5) -C₁₋₈ alkyl substituted amino, or
- 6) -C₁₋₈ alkoxy;

30

- 60 -

(II) a is a single bond;

R³ is -H;

n is zero; and

R⁴ is -CH₃; or

5

(III) a is a single bond;

R¹ is -CH₃;

R³ is -H;

n is 1; and

10 R⁴ is -CH₃;

or a pharmaceutically acceptable salt or ester thereof.

15 12. A compound selected from the group consisting of:

17-(t-butylaminocarbonyloxymethyl)-4-methyl-5 α -4-azaandrostan-3-one,

20 17-(methylaminocarbonyloxymethyl)-4-methyl-5 α -4-azaandrostan-3-one, and

20-(t-butylaminocarbonyloxy)-4-methyl-5 α -4-azapregnan-3-one,

25 or a pharmaceutically acceptable salt or ester thereof.

30

- 61 -

13. A compound selected from the group consisting of:

5 20-(t-butylaminocarbonyloxy)-4-methyl-5- α -4-aza-pregnan-3-one,

20-(isopropylaminocarbonyloxy)-4-methyl-5- α -4-aza-pregnan-3-one,

10 17-((2-ethylphenylamino)carbonyloxymethyl)-4-methyl-5- α -4-azaandrostan-3-one,

4-methyl-20-(methylaminocarbonyloxy)-5- α -4-aza-pregnan-3-one, and

15 24-(t-butylaminocarbonyloxy)-4-methyl-5- α -4-aza-cholan-3-one,

or a pharmaceutically acceptable salt thereof.

20

14. A pharmaceutical composition comprising a therapeutically effective amount of a compound of Claim 1 in a pharmaceutically acceptable carrier therefor.

25

15. The use of a compound of Claim 1 for the preparation of a medicament useful for treating benign prostatic hyperplasia, acne, female hirsutism, male pattern baldness, androgenic alopecia, prostatitis, and/or preventing prostatic carcinoma in

30 a human host in need of such treatment.

- 62 -

16. The method of Claim 15 wherein said compound is an inhibitor of 5 α -reductase 1.

5 17. The method of Claim 15 wherein said compound is an inhibitor of 5 α -reductase 2.

18. The method of Claim 15 wherein said compound is a dual inhibitor of both 5 α -reductase 1 and 2.
